

# PHILODENDRON FLORIDA GHOST PLANT CARE TIPS

01

## Watering

- Allow the top inch of the soil to dry out before watering.
- Water thoroughly, ensuring excess water drains from the pot.
- Avoid overwatering, as it can lead to root rot.

## Temperature and Humidity

- Maintain a consistent temperature between 65-80°F (18-27°C).
- Higher humidity levels are beneficial for this plant; misting the leaves regularly or using a humidity tray can help.

02

03

## Lighting

- Provide bright, indirect light for optimal growth.
- Avoid exposing the plant to direct sunlight, as it can scorch the delicate leaves.

## Fertilizing

- Feed the plant with a balanced liquid fertilizer every 4-6 weeks during the growing season (spring and summer).
- Reduce or suspend fertilization during the dormant season (fall and winter).

04

05

## Pruning and Trimming

- Prune leggy growth to encourage bushier growth and remove any damaged leaves.
- Philodendron Florida Ghost can be propagated through stem cuttings in water or soil.

## Pests and Diseases

- Common pests to watch out for include spider mites, mealybugs, and aphids. If you spot these unwanted visitors, take action promptly.

06

07

## Soil Quality

- Use a well-draining potting mix with good aeration.
- A mix containing peat, perlite, and orchid bark is ideal.
